

Daksh Sawhney

Final-Year CS Student — Aspiring SRE/DevOps Engineer – AWS | Kubernetes | Terraform | CI/CD

dakshsawhney@gmail.com | +91-9622727121 | Jammu, India

Portfolio | GitHub | LinkedIn

Summary

Final-year CS student targeting SRE/DevOps roles, with hands-on experience shipping and operating real **AWS** infrastructure – serverless APIs, EKS clusters with autoscaling, and Terraform-driven IaC. Separately built a **production-incident simulation platform** to study failure modes (CrashLoopBackOff, OOMKilled, DNS failures, DB exhaustion) at a level deep enough to teach it. Comfortable owning a service from provisioning through on-call: writing runbooks, tuning alerts, and doing root-cause analysis under time pressure.

Experience

AWS Cloud Intern – IPage UMS

Sept 2025 – Nov 2025 — Remote

- Built and deployed **serverless APIs** (AWS Lambda, API Gateway, DynamoDB) for a production-facing feature; cut **P95 API latency by 40%** through Lambda memory tuning and cold-start reduction.
- Enforced **least-privilege IAM** per function and stood up **CloudWatch dashboards, alarms, and on-call runbooks**, cutting **MTTR by 30%** during live incidents.
- Right-sized Lambda memory/timeout configs against real traffic, lowering monthly compute cost.

Multi-Cloud Computing Instructor – SelfCode Academy

Feb 2026 – Present — Remote, Part-time

Promoted from DevOps Instructor

Feb 2026 – Jun 2026

- Designed and taught **180+ hours** of DevOps/SRE curriculum (Docker, Kubernetes, Terraform, CI/CD, incident response); promoted to lead a vendor-agnostic multi-cloud track spanning AWS and Azure.
- Built **hands-on incident-simulation labs** (broken pods, DNS failures, DB exhaustion) requiring learners to debug from logs/metrics and write formal RCA reports – the same labs later became the basis for the Incident Zero project below.
- Directed 2 end-to-end capstone tracks (9hr and 5hr) from architecture through deployment, reviewing learner infra decisions and CI/CD pipelines directly.

Projects

Incident Zero – Production Incident Simulation Platform for SRE Training

Azure — Terraform — Kubernetes — CI/CD — Incident Response — RCA

- Built **5 reproducible failure scenarios** (CrashLoopBackOff, OOMKilled pods, K8s DNS failures, DB pool exhaustion, latency spikes) on **Azure** (Terraform-provisioned VM Scale Sets + Load Balancer) with automated CI/CD.
- Each scenario requires correlating logs, metrics, and K8s events to a root cause and writing a formal **RCA** – e.g. the DB-exhaustion scenario is driven by an intentionally missing connection-pool limit, forcing learners to spot it from pod-restart patterns rather than the error message alone.

High-Availability Event Platform (Reliability & Scalability Engineering)

AWS EKS — Terraform — GitHub Actions — Prometheus — Grafana

- Deployed a highly-available service on **AWS EKS** with **Horizontal Pod Autoscaling** to absorb traffic spikes without manual intervention.
- Automated provisioning with **Terraform + GitHub Actions** CI/CD, cutting deploy time from 40 min to 12 min (**70% reduction**).
- Load-tested to **50k concurrent users** at sub-200ms p95; traced early performance degradation to a mismatched **HPA CPU threshold and undersized pod resource limits**, then fixed both via Prometheus/Grafana metrics correlation.

Technical Skills

Cloud: AWS (EKS, Lambda, API Gateway, IAM, DynamoDB, CloudWatch), Azure (AKS, VMSS, Load Balancer), GCP, Cloud Security

Toolchain: Docker, Kubernetes, Terraform, GitHub Actions, ArgoCD, CI/CD Pipelines, Prometheus, Grafana, Monitoring & Observability

Practices: Incident Response, RCA, Postmortems, Runbooks, SLA/SLO/SLI, On-Call, FinOps

Core: Python, Bash/Shell Scripting, Linux Administration, Networking Fundamentals, Git

Education

Harcourt Butler Technical University

B.Tech in Computer Science and Engineering, CGPA: 8.2/10

- Final-year student – available for full-time SRE/DevOps roles; open to relocation.

Kanpur, India

Aug 2023 – Aug 2027
